

An amazing surface renovation product

VALUE erazzr® BIG BLOCK is delivered in a pack measuring 200mm x 180mm x 60mm. If required an erazzr holder can be purchased separately. A cut pad must measure 100mm x 60mm x 60mm to fit into the holder. Using a holder extends the useful life of the pad.

100mm x 60mm x 60mm erazzr® blocks supplied in packs of 3, 8 and 24 are also offered by the nationwide build shop that include erazzr holder(s).

Please note, although the erazzr looks like a sponge it should not be used like one. An erazzr works more like a large pencil rubber, it literally erases - rubs away grime and marks. Subject to the item or surface being renovated, different methods are employed each tailored to give the best results - see **Methods** on the following pages

erazzr is easily sliced into different thicknesses of pad. Some recommended thicknesses for different uses are given in these instructions. Please note, an erazzr pad will wear away or become grime contaminated with use. Depending on the type and extent of contamination, cut small pads can be discarded, or the dirty surface on a larger pad can be either sliced off, be rinsed under warm water or placed in a dishwasher – see TIPS below.

TIPS

Hold a cut erazzr pad lightly and rub the surface to be renovated gently ...no need to rub hard. NEVER wring out erazzr as this will reduce its useful life. For most uses, do not saturate the pad, only it's rubbing face that needs to be damp.

Once grime and grubby marks have been removed it is a good idea to rinse the surfaces or go over them with a damp shammy leather, a dry cloth, paper towel or towelling to remove water marks and loosened grime.

If the pad's rubbing surface is too wet for a particular use, PRESS it down on layers of paper towel to remove excess water.

For delicate surfaces, lacquered stainless steel and painted walls always test on an inconspicuous area to see if any surface damage occurs. Although no abrasive powders or active chemicals are incorporated erazzr is so efficient, it can sometimes remove some types of screen printed lettering from appliances – so take care, test a small area of any lettering before use.

Usually, the more stubborn grime, will require more water to be used.

It is important you brush or wash away any dust or grit particles which may cause scratching on surfaces before using erazzr.

Using pads cut from the erazzr BIG BLOCK, rinsing and after use advice

1. A larger erazzr pad's dirt contaminated rubbing face can be rinsed under warm running water - fig 1a. To evacuate the water from the pad, squash it to about HALF its thickness on a flat drainage surface or BETWEEN the hands to remove excess water - fig 1b. To further dry the pad it can be pressed down onto kitchen paper towel.
2. If the rubbing face of a large pad is very contaminated it can be sliced off with a sharp kitchen knife and discarded to reveal a new rubbing face – fig 2.
3. Where a large pad is very soiled (after cleaning greasy surfaces) place it in the top rack of your dishwasher under a bowl – fig 3. Having gone through one normal dishwasher cycle, rinse the pad under tepid running water then squash as described above to remove excess water.
4. Allow drying away from direct sunlight. The pad can be placed on a hot water radiator to facilitate drying.

Please note, erazzr is not efficient at removing thick calcium deposits or grime and marks from very porous surfaces such as un-polished wood or wall paper. Permanent marker pen may not be completely removed from porous plastic surfaces.

WARNING

As with any sponge-like material keep erazzr® out of the reach of children as small pieces could be a choking hazard

Methods

- Laminated and PVC-u surfaces
- Painted wood surfaces
- Plastic garden furniture
- Hard surfaces on boats and yachts
- Cars windscreens

1. Remove any dust or grit from the surfaces to be renovated as this could cause scratching.
2. Hose or wet down the surfaces with water, then gripping the **erazzr** pad lightly, gently rub away the grime whilst continuing the wet the work area. There is no need to saturate the pad.
3. Finally, where applicable, hose or wash down the renovated surface or alternatively dry with a shammy leather or towelling to remove any water marks.

For delicate surfaces and painted walls always test on an inconspicuous area to see if surface damage occurs. Although no abrasive powders are incorporated, **erazzr** is so efficient it can sometimes remove some types of screen printed lettering.

NOTE

erazzr should not be used as a car cleaning sponge, however a wet **erazzr** pad is particularly good at removing scuffs from fenders, insects from car windscreens and head-light lenses. A pad 20mm thick sliced off the block is good for cleaning dirt off alloy wheels.

DO NOT USE ON RECENTLY SPRAY PAINTED SURFACES

1. 20mm thick **erazzr** pad can be used on window frames

2. Rub surface with the **erazzr** whilst keeping the work area wet.

3. Use a cut **erazzr** pad to brighten up crystal glasses

4. Remove grubby marks from stainless steel surfaces.

- Stainless steel kitchen sinks
- Enamelled and plastic baths
- Porcelain sinks, wash basins and lavatories
- Shower trays and screens

erazzr is brilliant at removing tide marks, bath oil and soapy deposits. This method does not leave any detergent on the surface which can then act as a key to the build-up of further oil and soap deposits. You will notice the surface is much brighter.

1. Fill the sink/bath/ basin with about 10mm of warm water.
2. Wet the cut **erazzr** pad and gently rub the grimy surface.
3. Keep wetting the pad's surface as you work. Alternatively, a sprayer filled with clean water can be used to wet the surfaces.
4. Once grime is removed wash down surfaces and dry with towelling.

1. Put the plug in the sink and add about 10mm of warm water.

2. Dip the cut **erazzr** pad into the water and rub grime away.

3. Add more water and rinse away loosened grime.

4. Use a small damp **erazzr** pad to access difficult corners

- Cooker tops
- Removing grime from stainless steel surfaces

PLEASE NOTE, SOME STAINLESS STEEL SURFACES HAVE A LAQURED FINISH APPLIED BY THE APPLIANCE MANUFACTURER. ALWAYS TEST A SMALL AREA USING A DAMPENED **erazzr.**

1. Using a sprayer, wet down the grimy surface.
2. Dip the cut **erazzr** pad into the water and rub grime away.
3. Dry surface with a paper kitchen towel.

Although no abrasive powders or active chemicals are incorporated into the pad, **erazzr** is so efficient it can sometimes remove some types of screen printed lettering. Test a small area of any lettering before generally using **erazzr**.

SWITCH OFF ANY ELECTRICITY SUPPLY TO THE APPLIANCE

- **Computer keyboard, mouse, and casings**
- **Grubby telephones**
- **Greasy appliances e.g. chip fryer**
- **Larger areas on grimy electric equipment.**

SWITCH OFF THE ELECTRICITY SUPPLY TO THE APPLIANCE

1. For computer keyboards and grubby telephones, cut a pad 10 mm thick off the **erazzr** BIG BLOCK.
2. For greasy appliances and grimy electrical equipment, cut a pad 20mm thick.
3. Pour about 1mm of water into a shallow flat bottomed tray. Try to just cover the bottom of the tray.
4. Put the 10mm thick **erazzr** pad into the tray on top of the water and press down to dampen.
5. **ENSURE THE erazzr PAD'S RUBBING SURFACE IS ONLY SLIGHTLY MOIST. NO WATER SHOULD COME OUT OF THE PAD WHEN IT IS SQUASHED.**
6. If the pad is too wet, press it down on layers of paper towel to remove excess water.
7. GENTLY rub the grime away then dry using a paper towel.

On greasy surface, when the pad becomes too contaminated, discard and cut a new one.

Although no abrasive powders or active chemicals are incorporated into the pad, **erazzr** is so efficient it can sometimes remove some types of screen printed lettering. Test a small area of any lettering before generally cleaning.

Computer keyboard

Grubby telephones

Plastic chip fryer

Chemical free removal of grime

- **Small and large plastic toys**

As only water is used to activate the power of **erazzr**, this method is particularly child friendly for removing grime and grubby marks from toys. Smaller and wedge shaped pads can be cut to get into difficult corners.

1. Using a sprayer filled with clean water, wet the surface toy's grubby surfaces.
2. Wet the cut **erazzr** pad and gently rub the grubby surface keeping the work area wet with the sprayer. There is no need to saturate the whole pad.
3. Finally wipe down the toy's surfaces with a dry cloth. A mild disinfectant can be added to the water in the sprayer if you wish.

Alternatively for very large toys...

1. Use a pad 100mm x 60mm x 60mm thick and wet it in a bucket of warm water.
2. PRESS the pad between your hands to remove most of the excess water. DO NOT WRING OUT AS THIS WILL DAMAGE ITS STRUCTURE PREMATURELY.
3. Gently rub the grubby surface with the pad.
4. Once the grime has been removed, wipe the toy's surfaces with a dry cloth. A mild disinfectant can be added to the water if you wish.

Although no abrasive powders or chemical cleaners are incorporated **erazzr** is so efficient it can sometimes remove some types of screen printed lettering. Test a small area of any lettering.

WARNING
As with any sponge-like material keep **erazzr**® out of the reach of children as small pieces could be a choking hazard

VALUE **erazzr**® BIG BLOCK has been developed by Design 4 Associates and is exclusively marketed by **nationwide build shop limited**, Surrey, United Kingdom.
