

Surface water drainage channels for your homes driveway

RECYFIX® 100 Surface Water Drainage Channels come with slotted, galvanised steel gratings as standard.

Detail of slotted, galvanised steel grating.

Introduction – Recycled plastic goes down the drain

In recent years we have all become aware of the environmental impacts caused by using so much plastic including its eventual disposal into landfill or incineration. This global issue has become politicised to the extent many Governments have drafted legislation for controlling polymer production by encouraging its re-use via recycling schemes and taxing waste going to landfill. This has resulted in recycled plastic, used partly of wholly in many building components.

The recycled polyethylene (PE) and polypropylene (PP) polymer used by Hauraton for their RECYFIX® branded products derives from post consumer and post industrial sources. The plastic is so strong, drainage channels made from it are installed in the taxiways and maintenance areas at London Heathrow Airport.

RECYFIX® 100 Surface Water Drainage Channel

In many areas, localised flooding can be avoided if surface water drainage channels are kept clear of debris. The time taken to gain access to channel runs for cleaning is easy as the grating is securely held in position with a single bolt per unit length.

An optional accessory - two end caps, each incorporating a 70mm universal outlet. Article No. 40281

RECYFIX® 100 Drainage Channel				
Length per piece mm*	Width mm	Height mm	Weight kg	Article No
1000	160	135	4.4	40231
* Minimum order twelve lengths (12.0m). Only available in Black
