

Grass or gravel reinforcement grid system for your garden or driveway

Introduction

When a car or heavy vehicle, such as a 4x4, drives over grass, the wheels will damage the grasses roots, causing die-back and exposing the earth. If you are experiencing this problem then it may be wise to install Hauraton's RECYFIX® Reinforcement grid system. The system can also be used to stabilise gravel driveways and parking areas.

The RECYFIX® Reinforcement grid system from Hauraton Limited is a discreet and permanent surface reinforcement system with a loading capacity of 200 tonne/m² that easily allows for the weight of a fully laden 4x4 vehicle. The simply installed system consolidates the surface, prevents erosion, and yet still allows free drainage.

Set into grassed or gravel areas, interlinking module grid measures 387 x 334 x 38mm deep. Modules are made from the company's tough, specially formulated recycled polyethylene (PE) and polypropylene (PP) co-polymer with a colorant added that acts as a UV stabiliser. The plastics are derived from post consumer and post industrial sources.

250mm long anchor pegs are recommended on sloping ground where at least two are normally required of each unit. Where there is no retaining edge around a parking bay then at least twelve pegs are recommended around the perimeter of the bay. For larger grassed areas, optional parking bay marker inserts (Article No 40015) can be supplied – four recommended with every 68* grids supplied i.e. four per car park bay.

The product has been detailed for domestic use, car park areas in your garden or driveway.

RECYFIX® Reinforcement grid				
Length per piece mm	Width mm	Height mm	Article No Grid	Article No Anchor peg
387	334	38	40000	40020
Only available in Green. Weight per piece 0.61kg				
5.9 pieces installed cover about one square metre (m ²)				
*The minimum order from nbs is 68 pieces – This will cover an area measuring approximately 4.8m x 2.4m i.e. one car park bay.
